Reliable

Reliable level measurement ensures safe operation of the ethanol depot

Cost effective

High-precision measurement allows optimal utilization of the tank volume
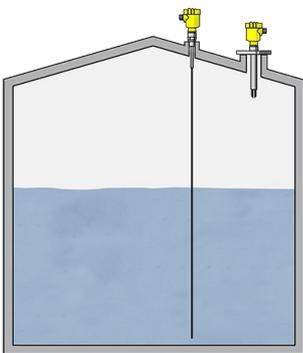

User friendly

Installation from top, offers easy mounting and simple adjustment, even when tank is full

Storage tank in an ethanol plant

Level measurement and point level detection in the ethanol storage tank

After going through all process steps, the bioethanol is stored in a tank ready for delivery to the consumer. Accurate measurement of the tank contents is an important prerequisite for fiscal inventory, reliable logistics planning and ensures a sufficient supply for customers. Since the tanks can often not be emptied after an initial filling, maintenance-free operation and setup without product are crucial considerations for the measurement technology.

More details

VEGAFLEX 81

Level measurement with guided radar in the bioethanol storage tanks

- High accuracy, unaffected by medium and vapours
- Simple mounting from above greatly facilitates retrofitting
- High reliability through device accreditation to SIL2/3

Show Product

VEGASWING 63

Level detection with vibrating level switch as overfill protection in the bioethanol storage tanks

- Adjustment-free setup and maintenance-free operation
- Simple function test via keystroke
- Reliable point level measurement in compliance with SIL2 and WHG
