

Reliable

Reliable measurement of the coolant volume

Cost effective

Maintenance-free measurement with high accuracy

User friendly

Simple mounting and setup

Coolant tank

Level measurement in the coolant tank

The cooling water is collected in tanks. Pressure pumps provide the water for cooling the manufacturing process. Level measurement in the coolant tanks ensures that there is always sufficient water available.

VEGAPULS 21

Radar sensor for continuous level measurement in the coolant tank.

- Wear and maintenance free operation thanks to non-contact measuring method
- Wide variety of simple mounting options
- High measurement reliability despite heavy condensate formation
